

CMSC6950 — Fall 2025

Homework #0

Due Date: Work must be submitted by email to smaclachlan@mun.ca from your MUN email account with subject line **CMSC6950 HW0** by 9am (St. John's time) on Monday, September 15 (but no late penalties will be applied).

1. (10 points) To help me better understand everyone's background, interests, and experiences, please send me an email with answers to the following questions:
 - (a) By what name would you like me to address you?
 - (b) What is your background in computing (coursework, past programming experience, Windows/Mac/Linux)? Do you have experience with the Unix shell, Python programming, Jupyter notebooks, and/or Git?
 - (c) Do you intend to use your own computer for this course, one of the LabNet machines, or something else? If your own, are you using a Windows, Mac, or Linux machine?
 - (d) What is your current degree program and when did you start it?
 - (e) What do you hope to get from this course?
2. **(Not to be handed in!)** Ensure that you are able to run a Bash shell *somewhere*, either on a LabNet machine, your own computer that you'll bring to class, or on a remote machine (that you can connect to from either your own computer or a LabNet machine).
3. **(Not to be handed in!)** Ensure that you are able to run Python *somewhere*, either on a LabNet machine, your own computer that you'll bring to class, or on a remote machine (that you can connect to from either your own computer or a LabNet machine). For our first classes, being able to run a Jupyter notebook is sufficient, so using <https://colab.research.google.com> is a reasonable option, but you will eventually need to interact with python at the command line.
